Artwork/Project Description

I made this where I had to come up with ideas and also had to understand how to prototype figma using reason. In addition, I also think about how the html and css can be in the centre and when zoomed out so it stays in the centre.

Project 1 of 5

Artwork/Project Description

I made this where I had to come up with ideas and also had to understand how to prototype figma using reason. In addition, I made the html and css to be pleasing to the eye. The JavaScript here is my challenge where I managed to create a chat feature even though it took a while.

FitnessApp](https://github.com/quition/FitnessApp)

Artwork/Project Description

I made this where I had to come up with ideas and also had to understand how to prototype figma using reason. For the front end code, I participated a little bit where I just tidied up the html.

Artwork/Project Description

I made this for a project assignment from BINUS to create a backend with asp.net C#. After I finished and submitted the assignment, I thought I wanted to add a style to learn more knowledge. but the style is not all finished. From this project there are also its own difficulties such as finding bugs that occur, finding errors, and especially finding something that makes why data cannot enter the database.

I made this because I was studying websites at bootcamp and had to do an assignment with this html portfolio. However, because I was bored, I made this project to improve my skills especially in css and html. For Javascript, I'm also learning but it's still basic and finally I can make it but the transition still needs to be improved.
